

FEATURED CLIMATE HIGHLIGHT

By: Jacob DeFlicht

In order to determine how many very rainy days occur within a wetter than normal month, some statistics were computed within months that had precipitation greater than 150% of their normal values. Below is a table for Allentown going back to 1950 containing all of the months which have had precipitation greater than 150% of normal as well as the number of days in those months in which daily precipitation values were greater than 1" or 2", respectively.

Date w/precip > 150%	# Days w/precip >=1"	# Days w/precip >=2"
January, 1953	2	0
